

Git Stage, Commit, Push

One thing to keep in mind is that Git/GitHub needs to stay in sync. If you make changes to your local directory, you need to push them to GitHub. If you make changes to GitHub, you need to pull them into your local directory. If you make changes to GitHub and then try to push new changes from your local directory without pulling the first change from GitHub, you will get an error message telling you just that.

For this assignment:

- Navigate to your CSD-430 directory.
- Create a new directory named module-1
 - **mkdir module-1**
- Do a directory listing of your CSD-430 directory and verify the new changes.
 - For windows C:\CSD\CSD-430>dir
 - For macOS/Linux enter: CSD-430>ls
 - Take a screenshot of the results.
- Open a Word document, put your name and assignment number at the top. Paste the screenshot into Word. Save the document as yourlastname_assignment number (ex. Sampson-Assignment1_2) to the new module-1 directory you made in CSD/CSD430.
- You should always check the status of your git/GitHub. Start at the CSD430 directory. All changes will be in subfolders. At this point, you should be up to date.
C:\CSD\CSD-430>git status
On branch main
Your branch is up to date with 'origin/main'.
- Stage: Adding files. We want all changes (new directory, new file in directory) to be staged, so instead of typing the individual filenames, we just use **one** of the following... they do the same thing, adding all changes.
C:\CSD\CSD-430>git add --all
C:\CSD\CSD-430>git add -A
C:\CSD\CSD-430>git add .
- Check the status again, you should see files to commit.
C:\CSD\CSD-430>git status
On branch main
Your branch is up to date with 'origin/main'.
Changes to be committed:
(use "git restore --staged file.." to unstage)
new file: module-1/Sampson-Assignment1_2.docx
- Time to commit. Always a good idea to add a comment or message to the commit. Helps keep track of when the activity occurred.
C:\CSD\CSD-430>git commit -m "Pushing 02/19/23"
[main 013884b] Pushing 02/19/23
1 file changed, 0 insertions(+), 0 deletions(-)
- Next, time to push the changes to your GitHub repository.
C:\CSD\CSD-430\module-1>git push origin main
Enumerating objects: 7, done.
Counting objects: 100% (7/7), done.
... additional details
- Check your GitHub remote repository for the push. It might take a little time, so be patient. When you see module-1, click it to open, and take a screenshot. Add the screenshot to your Word document and copy the URL of your repository into the Word document, and save.
- GitHub-Opener Document.
